EXPERIENCE

- WhatBytes** Bangalore, Remote
React Native Intern March 2026 – Present
 - Built and maintained **6+ production mobile application modules** using React Native and REST APIs.
 - Implemented end-to-end **Passkey/WebAuthn authentication** and Digilocker KYC integration flows with custom drop-off handling logic.
 - Integrated and managed **20+ APIs** across **20+ application screens** using TanStack Query and Redux.
 - Developed centralized backend error handling workflows, contributing to a **50% reduction** in overall application crash rates.
- Capsule Labs** Kolkata, On-site
Full Stack Developer Intern August 2025 – December 2025
 - Developed **7+ dashboard interfaces** and integrated **50+ REST APIs** across 3 correlated internal projects.
 - Optimized aggregate query pipelines using DuckDB and Redis caching, reducing processing latency from **1000ms to 100ms**.
 - Built React-based admin and partner management systems integrated with FastAPI and PostgreSQL services.
 - Designed the V1 architecture for a WordPress-based product plugin, defining backend integration flows and scalable system structure.

PROJECTS

- BistroChains - Restaurant Management System:** Live Demo — Frontend Repo — Backend Repo
 - Built a full-stack restaurant management platform with **37+ REST API endpoints** and **13+ frontend screens** supporting bookings, orders, billing, and role-based operations.
 - Engineered JWT-based authentication, reservation overlap management, and concurrent table workflows supporting **20+ booking scenarios** across Admin, Staff, and Customer roles.
 - Integrated Razorpay payment systems with backend-controlled order initialization and **HMAC-SHA256 verification** for secure payment handling.
 - Designed real-time kitchen and reservation workflows using Go background workers and MongoDB embedded document architecture.
 - Deployed frontend and backend services on **Vercel** with Swagger/OpenAPI documentation for API testing and integration.

Tech Stack: Go, MongoDB, React 19, TypeScript, TanStack Query, JWT, Razorpay API, Swagger/OpenAPI, Vercel
- RagGame:** Repository
 - Built a **multi-agent RAG-powered terminal game** integrating LLM agents, evaluation engines, and reasoning workflows for dynamic gameplay generation.
 - Implemented embedding-based retrieval pipelines with on-device document retrieval latency of approximately **50ms**.
 - Built conversational memory and reasoning systems for AI-driven move validation and contextual decision generation.

Tech Stack: Python, LangChain, RAG, Vector Databases, LLMs

SKILLS

- Languages:** Go, TypeScript, JavaScript, Python
- Backend:** Gin-Gonic, Node.js, FastAPI, REST APIs, JWT Authentication
- Frontend:** React, React Native, TanStack Query, Tailwind CSS
- Databases:** MongoDB, PostgreSQL, Redis, DuckDB
- Developer Tools:** Git, Docker, Postman, Swagger/OpenAPI, Vercel

EDUCATION

- RCC Institute of Information Technology (RCCIIT)** Kolkata, WB, India
Bachelor of Technology in Computer Science and Engineering — CGPA: 7.6 October 2022 – June 2026

ACHIEVEMENTS

- First Runner-Up – Smart Bengal Hackathon:** Built an AI-powered social impact solution and secured Runner-Up placement among multiple competing teams.
- Competitive Programming:** Solved **200+ coding problems**, participated in ICBC and TCS CodeVita, and achieved a **Top 5000 global rank** in TCS CodeVita.
